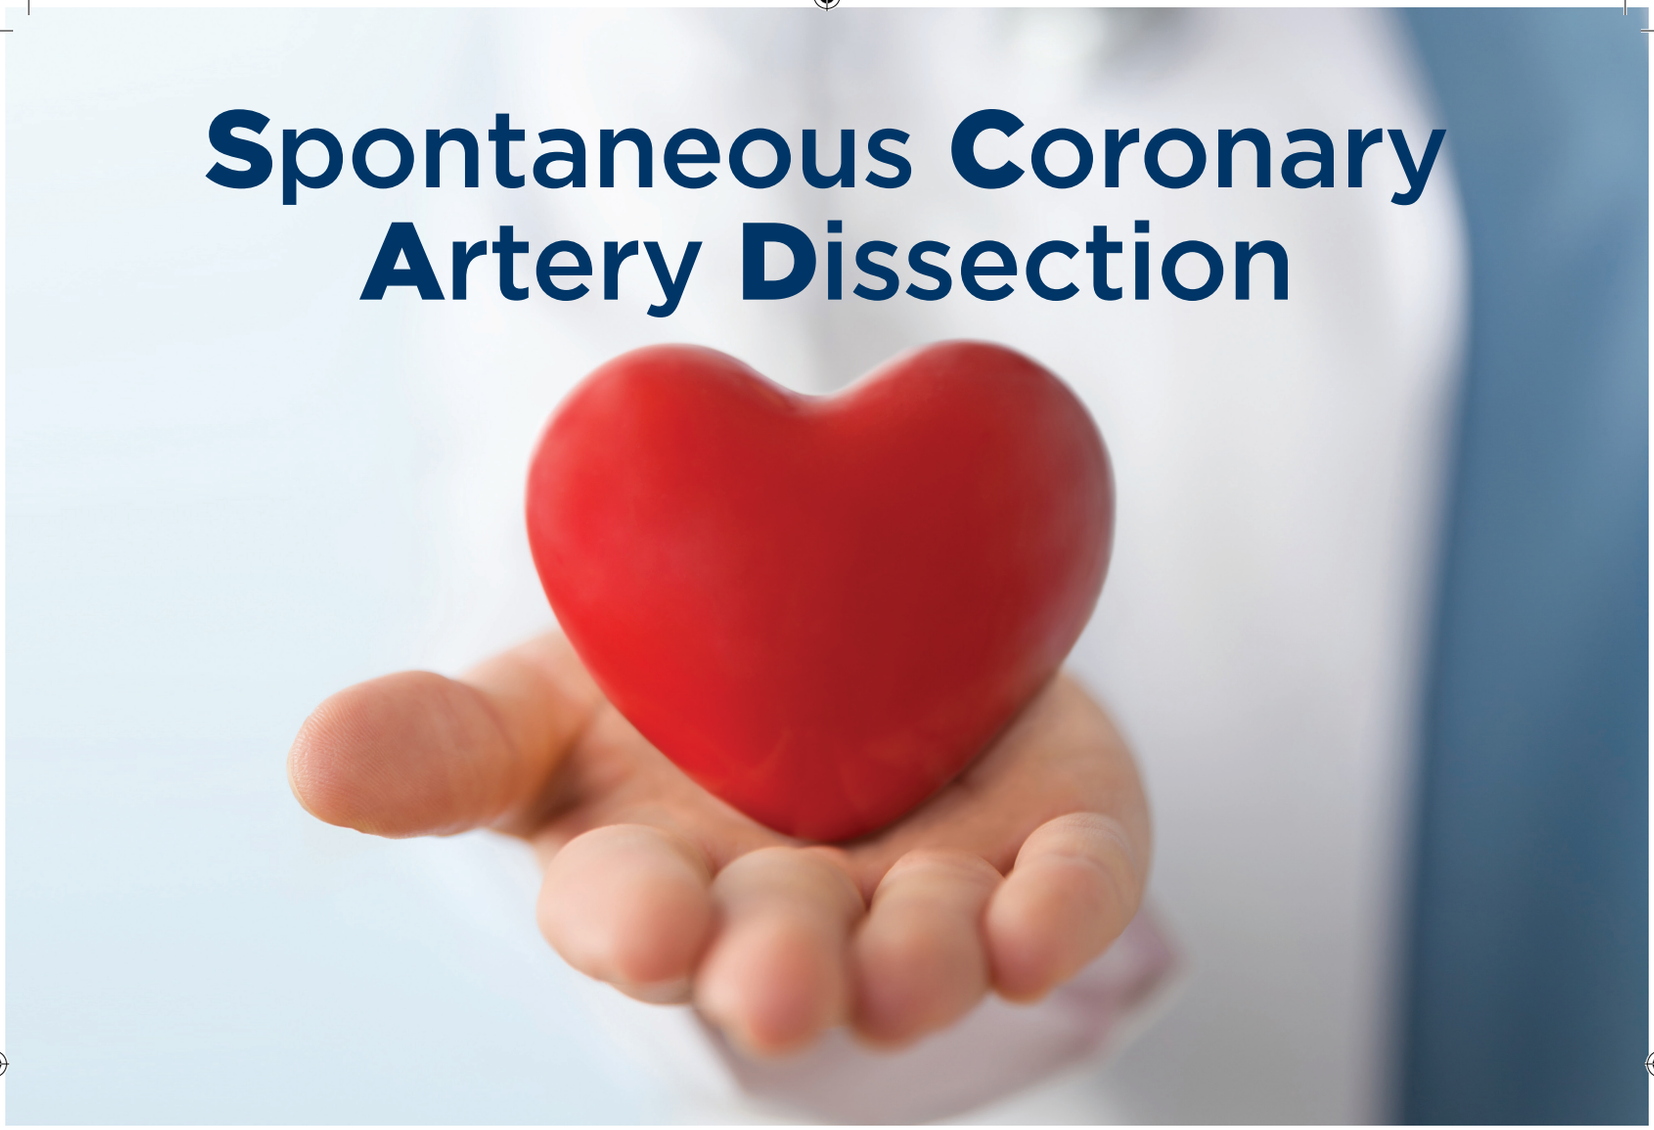
Spontaneous Coronary Artery Dissection



Town Hall: SCAD—Unique or Not?

Tracy Stevens, MD, Jason Lindsey, MD, and the Muriel I. Kauffman Women's Heart Center team invite you to share in an open discussion to learn more about SCAD, a life-changing event.

SCAD is a rare and often unrecognized acute heart attack that predominantly occurs in young healthy women.

In addition to increased awareness about this condition, targeted research is needed to advance the science of SCAD so survivors are empowered with up-to-date knowledge throughout their journey.

You'll also learn more about the Women's Heart Center's participation in the iSCAD Registry, an independent, multicenter data repository aimed at advancing SCAD research around the world. The Women's Heart Center has advocated for the hearts of women for more than 24 years, and is honored to be the first center to join this registry.

Wednesday, Feb. 21
6:30 – 8 p.m.
